BELUGA Whale facts

Beluga whales range from 13 to 20 feet long.

They are a threatened species.

They live between 35 and 50 years

They are easily distinguished from other whales because of their stark white color.

They have rounded foreheads and no dorsal fin.

They communicate with each other through clicks, whistles, and clangs.

They feed on fish, worms, and crustaceans.

They are related to narwhals.
